

Installation Instructions for Wall Hung Hutches

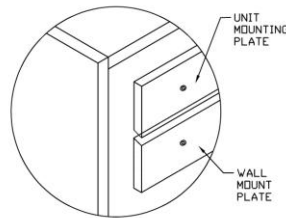

Step 1: The mounting plates are located on the back side of the unit.

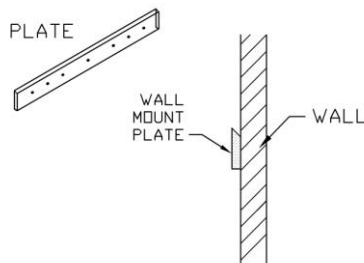

Part List

- Unit Mounting Plate
- Wall Mounting Plate
- 1-3/8" wood screws
- Attaching hardware for wall mount plate (not included)

Step 2: Remove wall mounting plate from the back side of unit. Do not remove the unit mounting plate. Bore thru the 1/2" deep x 3/16" diameter guide holes located in the back of the unit for mounting.

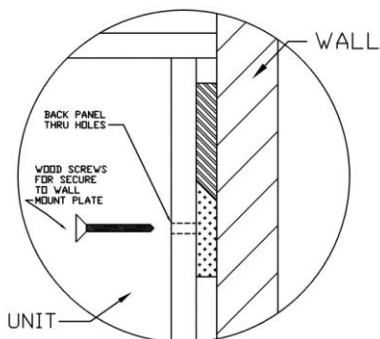

Step 3: Securely attach mounting plate to structure wall as shown. Tall wall units have (2) sets of plates for additional mounting strength. The spacing of these plates is critical.

Step 4: Hook wall hutch unit mounting plate to the wall mounting plate so the two wedges interlock.

Step 5: Insert wood screws thru the back panel of the unit to secure the unit to the wall mount plate. The screws should penetrate the mounting plate and the wall of the structure.

Note:

A building contractor should be consulted for proper installation to ensure unit is securely fastened and does not fall causing personal injury or property damage. Indiana Furniture is not responsible for the wall structure or the field installation methods. Specific conditions at an installation site must be considered prior to determining the best method of attachment.
